FastWall Freestanding

The FastWall box joiner is the perfect solution for creating freestanding hoarding. Using the HoardFast support post with weight the box section fits over the post to provide a connecting point for the FastWall panels. Using this system a temporary wall or delineation barrier can be installed in a very short space of time.

FastWall Super Tall

The FastWall box joiner can also be used as a connecting and support post for extra tall hoardings. These sections are available to create walls of up to 7.2m high. By incorporating the FastWall Box Joiner as a horizontal member, 2 standard height panels can be stacked to provide a wall to the height you require.

FastWall Black

FastWall is also available in a black finish which is the preferred colour choice in many shopping centre projects nationwide.

FastWall Premium

FastWall Premium is a 350mm wide panel with a PVC heavier wall design. Its smooth face and tight fit tongue and groove allow it to be used in permanent applications, as well as for temporary hoarding.
